SHADMAN HOSSAIN

AI Security & Security Engineering | Cybersecurity Graduate

Birmingham, UK | UK right to work – no sponsorship required

sm.shadman.hossain@gmail.com | linkedin.com/in/shadman-hossain | github.com/shaddiegit

PROFILE

First-Class cybersecurity graduate building AI-agent authorization prototypes, detection engineering tools, and security automation. FDM consultant providing first-line Outlook and Teams support on a Deutsche Bank assignment. Project work focuses on least privilege, execution mediation, memory integrity, structured LLM outputs, multi-stage detections, and threat intelligence correlation. Seeking junior security-engineering or AI-evaluation opportunities.

PROFESSIONAL EXPERIENCE

FDM Group – Consultant, EUC / Email Specialist (Level 1) | Current

Client assignment: Deutsche Bank

- Provide first-line support for Outlook and Microsoft Teams issues affecting colleagues in a banking environment.
- Investigate user issues within a ServiceNow-based support workflow and escalate matters requiring further technical support.
- Exposure to operational monitoring tools including Nagios.

SELECTED PROJECTS

ADAM / EVE / Mizan | AI-agent authorization and safety prototype | 2026

- Separated action proposals, adversarial critique and independent policy/execution mediation; evaluated authorization boundaries, tool-use controls and persistent-memory integrity.
- Reported 21/21 Phase-8 and 7/7 concept tests passing, plus 16 memory-purger tests (one CUDA-only skip). Retained a no-go boundary for consequential autonomous use.

SOC Detection Lab & IOC Hunter | Python, Sigma, Pytest | 2026

- Developed multi-stage detections and time-window event correlation; hardened IOC aggregation against malformed inputs and injection risks with 19/19 security tests passing.

ThreatWeave | Go, Claude API | 2026

- Built a concurrent threat-intelligence CLI aggregating four feeds, correlating IOCs by ASN and MITRE ATT&CK overlap, and producing structured dossiers; 5/5 concurrency tests passed.

SecureView | TypeScript, React, Claude API | 2026

- Built a SOC triage dashboard for prioritisation and remediation guidance, using typed LLM data contracts and 17/17 passing unit tests.

Supply Chain Risk Assessment Framework | Dissertation, VBA | 2025–2026

- Developed a 15-criterion weighted vendor-risk model informed by NIST SP 800-161; evaluated historical incident cases and iterated through UAT with non-technical users.

TECHNICAL SKILLS

Engineering: Python / Pytest, Go, TypeScript / React, Bash, Linux, REST APIs, Git / GitHub; AWS S3, IAM and EC2

Security: MITRE ATT&CK, Sigma, Wazuh, ELK, Splunk, IOC analysis, threat hunting; NIST CSF / SP 800-161, ISO 27001, third-party risk

AI & Support: Claude API / Anthropic SDK, evaluation design, MCP fundamentals, tool-use controls; Outlook, Teams, ServiceNow, Microsoft Intune

EDUCATION & TRAINING

BSc (Hons) Ethical Hacking & Cyber Security, Coventry University | First-Class Honours, July 2026

Anthropic Claude Academy: seven completion badges, September 2026 (Claude 101, Model Context Protocol, Claude Code in Action, Claude Code 101, AI Capabilities and Limitations, Claude Cowork, AI Fluency).

Pluralsight (via FDM), August 2026: Skill IQ Expert in Microsoft Intune Fundamentals (97th percentile) and ServiceNow (90th percentile); 20 courses completed in IT service management and operations.

BTEC Level 3 National Diploma in IT, Birmingham Metropolitan College | Double Distinction Merit, 2020–2022

ADDITIONAL EXPERIENCE

Hospitality & Operations, multiple venues / Jaguar Land Rover | 2020–2025: customer-facing service, stock handling and operational teamwork.
