Junior GRC Analyst · SOC Detection Engineer · Threat Intelligence

First-Class Honours track (73.67%) | Dissertation 87% / 76% - SCRA Framework (NIST SP 800-161) | 5 Security Projects · 44 Unit Tests | Python · Go · TypeScript · Claude API

PROFESSIONAL SUMMARY

Final-year BSc Ethical Hacking & Cyber Security student on track for First-Class Honours (73.67% average) with hands-on experience in GRC risk assessment, SOC detection, and threat intelligence tooling. Dissertation (87% Part 1 / 76% Part 2): built a supply chain risk assessment framework tested against real breaches - SolarWinds VRI 47%, Kaseya 40%, Log4Shell 28%, all flagged HIGH RISK using only pre-incident data. Five security projects across Go, Python, and TypeScript: a threat correlation engine (5 tests), a SOC dashboard with Claude API (17 tests), an intrusion detection lab (3 tests), and an IOC aggregator (19 tests). Skilled in NIST CSF 2.0, NIST SP 800-161, and MITRE ATT&CK.

CERTIFICATIONS

ISC2 Certified in Cybersecurity (CC)

Exam: 11 June 2026 (active before mid-July role starts)

Covers risk management, network security, security operations, and access controls.

TECHNICAL SKILLS

GRC & Risk	NIST CSF 2.0 (all 6 functions), NIST SP 800-161, NIST RMF, ISO 27001, UK GDPR Art.28, Principal-Agent Theory, weighted decision matrices, gap assessment, remediation roadmapping
SOC & Detection	Wazuh, ELK Stack, Splunk, Sigma-style YAML rules, MITRE ATT&CK (tactics + T-codes), time-window correlation, log analysis, incident triage, IDS, alert enrichment
Threat Intel	ThreatFox, URLhaus, AbuseIPDB, VirusTotal, IOC classification, risk scoring, threat actor profiling, OSINT, forensic analysis (SolarWinds / Kaseya / Log4Shell)
Programming	Python (38+ tests: IOC aggregator, detection engine), Go (goroutines, concurrent I/O), TypeScript (React, strict types), Bash, Excel VBA, Playwright
AI & Automation	Claude API, Anthropic SDK, LLM prompt engineering, structured JSON outputs, automated threat triage and incident report generation
Offensive / Cloud	Kali Linux, Nmap, Burp Suite, Metasploit, Wireshark, OWASP Top 10, AWS (S3, IAM, EC2), Linux admin, REST API integration

SECURITY PROJECTS & RESEARCH

Supply Chain Risk Assessment (SCRA) Framework - Dissertation

2025–2026

NIST SP 800-161 · Principal-Agent Theory · Weighted Decision Matrix · Excel/VBA · 40 credits

Grades: Part 1 (Research Preparation) 87% | Part 2 (Research Delivery) 76%

- Built a framework to help IT procurement teams assess SaaS vendors before signing contracts - designed to close the information gap (**Principal-Agent Theory**) that allowed SolarWinds, Kaseya, and Log4Shell to pass vendor checks despite weak security posture.
- Ran thematic analysis on CISA, Mandiant, and NCSC forensic reports; identified **15 criteria** across three weighted pillars - Corporate Governance & Transparency (40%), Development & Release Hygiene (35%), Incident Response (25%).
- Built an Excel/VBA artifact with a **Vendor Risk Index (VRI) score and a kill-switch** that blocks compensating controls from hiding critical failures. Tested against SolarWinds (47%), Kaseya (40%), and Log4Shell (28%) - all flagged HIGH RISK. UAT with two non-technical procurement staff; **zero comprehension errors** on the final version.

ThreatWeave - Threat Intelligence Correlation Engine

2026

Go · Goroutines · Claude API · Threat Actor Profiling · github.com/shaddiegit/threatweave

- Built a Go tool that groups IOCs by shared hosting ASN and MITRE tactic overlap, then calls the Claude API to write a threat actor profile for each cluster. **5/5 unit tests pass**; correctly groups 7 sample IOCs into 4 clusters.
- All four intel feeds (ThreatFox, URLhaus, AbuseIPDB, VirusTotal) run in parallel via goroutines with no data races. Runs fully offline without an API key using a bundled local reference feed.

SecureView - SOC Analyst Dashboard

2026

[TypeScript](#) · [React](#) · [Claude API](#) · [Strict Types](#) · [github.com/shaddiegit/secureview](#)

- Built a TypeScript/React SOC dashboard with two live Claude API calls: a triage analysis returning a risk score, MITRE mappings, and false-positive rating; and a full incident report with executive summary, timeline, and remediation steps. **17/17 tests pass.**
- All data - alerts, IOCs, analysis results, and reports - is typed through strict TypeScript interfaces, so contract errors are caught at compile time rather than at runtime.

SOC Detection Lab - Blue Team / Detection Engineering

2026

[Python](#) · [Sigma YAML](#) · [MITRE ATT&CK](#) · [Log Correlation](#) · [github.com/shaddiegit/soc-detection-lab](#)

- Wrote four Sigma-style YAML detection rules covering a four-stage attack chain (recon, initial access, privilege escalation, exfiltration). All four stages detected with **zero false positives** on clean logs; 3/3 pytest tests pass.
- Time-window correlation ties 47 failed SSH attempts in four minutes to a successful login from the same IP, then tracks that IP through privilege escalation and a **90 MB outbound transfer** - producing a four-alert incident chain.

IOC Hunter - Multi-Source Threat Intelligence Aggregator

2026

[Python](#) · [ThreatFox](#) · [URLhaus](#) · [AbuseIPDB](#) · [VirusTotal](#) · [github.com/shaddiegit/ioc-hunter](#)

- Python CLI that queries four threat-intel feeds at the same time, normalises the results into a single verdict, and outputs console, JSON, or HTML reports. A **--fail-on-malicious** flag exits with code 1 for CI pipeline use.
- **19 tests** cover input security (CRLF injection, null-byte, ReDoS guards plus a 100k-line cap), IOC classification accuracy, and API regression. Runs offline with a bundled feed containing EICAR hashes and RFC 5737 IP ranges.

NIST CSF 2.0 Gap Assessment - GRC Portfolio

2026

[GRC](#) · [Risk Assessment](#) · [Remediation Roadmap](#) · [github.com/shaddiegit/nist-csf-gap-assessment](#)

- Maturity assessment across all six NIST CSF 2.0 Functions for a fictional NHS supplier - current state **1.32/4**, target **2.75/4**. Six prioritised findings, a three-phase 12-month remediation plan, and a ten-question supplier questionnaire covering UK GDPR Art.28 third-party obligations.

EDUCATION

BSc (Hons) Ethical Hacking and Cyber Security - Coventry University

Sep 2023 – Jul 2026 (Expected)

Expected First-Class Honours | Overall Average: 73.67% | Key modules: Digital Security Risk & Audit, Security Operations, Information Security Management, Applied Cryptography (75%), Advanced Penetration Testing

BTEC Level 3 National Diploma in IT - Birmingham Metropolitan College

Sep 2020 – Jul 2022

Double Distinction Merit | Distinctions: IT Project Management, Programming, Mobile Apps

EMPLOYMENT

Bartender (part-time) - Multiple venues

2020–2025

- Handled 40–60 customer transactions per shift and resolved conflicts without escalating to management. Regularly explained menu options and allergen information clearly to a wide range of customers.

Warehouse Operator - JLR (Jaguar Land Rover), Birmingham

May 2021 – Aug 2021

- Operated JLR's warehouse management system; hit **99.2% inventory accuracy across 12,000+ SKUs** and completed 50+ daily picks with no compliance violations.

Waiter - Indian Dreams, Birmingham

Jun 2020 – Jul 2020

- Front-of-house role in a busy restaurant; took orders and handled complaints during service.

ADDITIONAL

AWS Healthcare AI Triage - Team Lead

2022

[Birmingham Metropolitan College](#) · [AWS](#)

- Led a team building a healthcare AI triage concept. During the design review, identified three GDPR issues - biometric data processing under Art.9 and two re-identification risks from public data - which led to the project being stopped before build.
